

UTS Genetic Counselling Overview

A/Prof Alison McEwen
Graduate School of Health
UTS

Overview

- What is genetic counselling?
- UTS Master of Genetic Counselling
- Community Placements

What is genetic counselling?

What is Genetic Counselling?

Genetic counselling as practiced by genetic counsellors is 'the process of helping people understand and adapt to the medical, psychological and familial implications of genetic contributions to disease. This process integrates the following: interpretation of family and medical histories to assess the chance of disease occurrence or recurrence; education about inheritance, testing, management, prevention, resources and research; counseling to promote informed choices and adaptation to the risk or condition' (Resta, 2006)

What is Genetic Counselling?

- At UTS we believe that genetic counselling should:
 - be person-centred
 - empower the individual and family
 - foster autonomy
